

Using Projector and Amplifier in the Team Time Room

Located above the Team Time Room projector is an amplifier that can increase your volume on the computer or with a microphone to near deafening levels.

1. **For video and loud audio from the main computer**, turn on the projector and make sure it is on the computer source. Turn on the amplifier (mounted above the projector) using the remote on the computer cart.

2. **For video and loud audio and the microphone**, turn on the projector and make sure it is on the computer source. Turn on the amplifier (mounted above the projector) using the remote on the computer cart. Hang the white microphone on the lanyard around your neck...make sure you also turn on the microphone by pushing the power button on the top.

3. **For just a loud microphone**, turn on the amplifier using the remote and the microphone on the lanyard. Then you can just hang the microphone around your neck and walk around. This can be very useful for quiet students!!

4. Please be sure that the microphone and amplifier remote are off and returned to the computer cart when you are finished.
